## VISUAL LEARNERS:

**Definition:** Visual learners learn optimally through observation. They like to see visual stimuli such as tables, graphs, maps, and pictures.

### Learning Strategies:

- Use visual associations and vivid imagery to enhance memory.
- Have a clear view of instructors so you can see body language and facial gestures.
- Form pictures (visualizations) in your mind while reading, listening, or studying.
- Use videos, movies, and animations to illustrate information learned in school.
- Make flash cards with images (use a variety of colors for different concepts).
- Use visual study aids like pictures, maps, charts, graphs, and flow charts.
- Color-code the steps it requires to complete a process.
- Either draw or use drawings to capture images of information that you have to learn.
- Underline or highlight important points in text.
- Pay close attention to pictures that illustrate readings or concepts.
- Draw your own personal visualizations when listening to audiobooks.

### Organizational Strategies:

- When your space is clean and organized, take a picture of it. Use this as a guide.
- Create a visual map of how you want to organize your things.
- Label drawers, boxes, shelves, cubbies, and files so you can see where things go.
- Color code and label materials so it is easy to locate things.
- Create daily, weekly, and monthly calendars to accomplish chores, schoolwork, appointments, and other events. If you have more than one child/adult in the household, color-code them.
- Use a planner with designated spots for each class or activity.
- Have someone show you how to be organized.
- Go shopping to places like The Container Store, and pick out things that will help you get organized.
- Use virtual stickies on your desktop.
